- <https://github.com/jgm/pandoc/releases/tag/2.7.2>
- <https://github.com/Wandmalfarbe/pandoc-latex-template/releases/tag/v1.2.2>
- LaTeX

Setup

From the Pandoc Latex Template download, copy `eisvogel.tex` to

`~/.pandoc/templates/` (if this doesn't exist create it)

Rename `eisvogel.tex` to `eisvogel.latex`

Editing the Document

Markdown is easiest to use (you can use Sublime, VS Code etc) but you can use LaTeX editor with the `.tex` file.

Once you have finished editing the `.md` file or the `.tex` file, run the respective command to compile everything (run them from the documentation folder from git):

Create `.tex` & `.pdf` from the edited the `.md` file

```
pandoc trekstar-documentation.md -o trekstar-documentation.tex --
template eisvogel
pandoc trekstar-documentation.md -o trekstar-documentation.pdf --
template eisvogel
```

Create `.md` & `.pdf` from the edited the `.tex` file

```
pandoc trekstar-documentation.tex -o trekstar-documentation.md --
template eisvogel
pandoc trekstar-documentation.tex -o trekstar-documentation.pdf --
template eisvogel
```
